SHIPPING OF TUBES

Dear valued customer,

RF Tubes are highly sensitive electronic components. For this reason kindly note our

SHIPPING RECOMMENDATIONS:

IMPORTANT:

TUBES SHOULD BE TRANSPORTED IN UPRIGHT POSITION ONLY !!

- 1.) Kindly return the tubes in the complete original box. We recommend packing this cardboard box into a surrounding cardboard or wooden box if not provided by the original packing already. This outer box should be fixed on a pallet standing upright by fixing belts.
- 2.) If the original packing is not available kindly wrap the tube in air bubble foil carefully. Put the wrapped tube **standing upright** into a stable cardboard box which provides additional damping material (foam / etc.) on bottom, side and top. The tube has to sit stable in an upright position!
Do not use chips as damping material as the tube would walk during transport to an outer wall losing the protective damping properties!
Put this box into another a surrounding cardboard or wooden box which fixes the small box by damping material as well.
Fit it on a pallet and fix it with belts.
- 3.) If you are returning a larger or valuable tube **do not use UPS or public mail services**. These services will reload and transfer with automatic systems tumbling the package all the way round.
If a tube is transported lying on the side it can be damaged very easily by shock and vibration. Falling from a height of 0.5m may damage it completely
- 4.) **Shipping Address:**
